Business Specification:

We need to build an Interactive dashboard which can help the Business Users to better understand the perceived presence of IonIdea/Client business in the marketplace.

The dashboard will help to capture and curate content & conversations based on social insights analysis that can become digital assets based on external messaging.

The dashboard will focus on these Industries:

- Retail
- Healthcare
- Telecom

We need to analyze the sentiment across the conversations and classify the data on geography and demographic dimensions.

Choose the best in class architecture to implement this requirement and build the dashboard using Tableau/any Web User Interface

Data Source:

Please refer to the search keywords for each Industry and collect last 3 months data (i.e. July 2015 – Sep 2015) from Twitter Feeds and other Social Media sources like linked-in, Facebook, blogs, news, videos…

As the source of the data will be in the form of JSON files, you need to parse the data and run through NLP (Natural Language Processing) algorithm for exploring the sentiment/emotions within the conversations

As the data volume would be very high restrict the document count to 1 Million per month

Industry Specific Theme & Brand Classifications:

1) Retail

   a. E-Commerce
   b. Retail Customer Centricity
   c. Mobile Retailing

2) Healthcare

   a. Patient Engagement
   b. Healthcare Optimization
   c. Reform Compliance

3) Telecom

   a. Digital Services
   b. Smarter Networks
   c. Internet of Things

EXAMPLE USE CASES of the Dashboard

WHAT'S HOT IN SOCIAL MEDIA?

The Industries/Themes we used are very relevant to IonIdea/Client. If you want to see which theme is trending high in social media, look at the Themes panel. If you read the content associated with that theme, you can discover what people are talking about the most. You can see the words people use to talk about it and who is talking about it. *Are we using the right words to convey our messages, i.e. words that people will recognize and understand?*

WITH WHOM SHOULD WE BE ENGAGING?

If you want to engage with people actively talking about a topic, look at the Influencer panel. *Are we talking to these people?* If you want to engage on Twitter, filter by Channel to see only Twitter content and find out who is talking about a topic and decide if you want to jump into the conversation, engage with those people.

WHAT ARE OUR COMPETITORS TALKING ABOUT?

If you want to know more about what our competitors are talking about, look at the company panel. See who is actively engaging on a specific topic and understand what they are talking about. *Do we differentiate ourselves from them or are we all saying the same thing? How can we rise above the noise?*

Keywords for data gathering:

Retail Keywords:
retail,retail store,retailing,retailers,retail shop,omnichannel,omni-channel,ecommerce,e-commerce,ecommerce platform,e-retailing,On-demand delivery,same day delivery
